Mr Socrates Thanasas,
Farmingdale State College
Head of the Engineering Department

Respected Sir,

My name is Piter Garcia and I am enrolled in two of your bachelors programs, Computer & Electrical Engineering Technology. I am contacting you due to some issues that have been happening in two of the courses offered in your department, Networking I and Networking II . The main reason to my concern is regarding the treatment that is being giving to all students in class. Besides the fact that professor Traves talks to every student in a disrespectful way, his lectures have no order whatsoever.

First, an offensive attitude against students affects us not only mentally but emotionally. This provokes students self-esteem and class performance decrease to a level of wanting to withdraw the class. I personally believe that no student should continue having this kind of treatment any longer. The professor must change the way he approaches each student in order to have a better and fair learning system. Screaming, bad attitude, and offensive words are not the key for a student to succeed in a class and could be seriously judged by school authorities.

Second, a professor whose lectures are not in order cannot expect students notes to be perfectly ordered. He judges students notes when he himself does not keep a schedule of the material thought, going back and forth with topics already taught. Another, assigning topics that have not been taught on labs and tests makes students confuse in terms of what is going on in class. Moreover, teaching new material to a selected group in class is very unethical and causes students to lack in class while others are moving on into a new topic. The professor should teach his class lectures fairly and evenly to each student in order to keep a balance in his class.

In brief, the manner in which professor Traves approaches his students must change for his class to be successful and cause a positive impression in students futures. Any kind of disrespectful behavior towards the students must change since he must be an example for every student. The class materials must be organized and evenly taught to each one of the students to maintain a balance in his class.

Thank you for your support and consideration.

Courteously,

Piter Garcia
Student at Farmingdale State College
Majored in Electrical & Computer Engineering Tech.
